Short Bio

Dr. Qinghua Chen is an assistant professor at National Institute of Education, Nanyang Technological University. He specializes in language education and poststructuralist approaches to identity and power relations in educational contexts. His research integrates Foucauldian frameworks with critical perspectives on language teaching. Currently, he leads projects examining generative AI's impact on language education and teacher agency. With academic experiences spanning Canada and Asia, his work critically engages with governmentality, subjectification, and knowledge-power relations in educational contexts. He has published extensively in journals including Critical Inquiry in Language Studies and Linguistics and Education.

Extended Summary

Dr. Chen's research trajectory reflects his deep engagement with poststructuralist theory, particularly Foucauldian perspectives on power, knowledge, and subjectivity in educational contexts. His doctoral work at Simon Fraser University examined immigrant subjectivity formation through poststructuralist and postcolonial lenses, while his current research investigates language teacher agency and power relations in the era of generative AI. As co-investigator on multiple funded projects including the Theorizing Plurilingual Assessment (HKD 3M) and Social Media Analytics Research (a team member), he bridges poststructuralist theoretical frameworks with practical pedagogical applications.

His recent publications focus on subjectivity reconstitution, decolonial approaches to language education, and ethical AI integration in educational contexts. His work is characterized by innovative methodological approaches, including narrative inquiry and collaborative ethnography that align with poststructuralist epistemology. He maintains active research collaborations across Asia-Pacific regions, contributing to theoretical developments in critical approaches to language education and teacher subjectivity.

Beyond academic research, Dr. Chen engages in professional development initiatives, delivering workshops that challenge traditional power structures in language teaching through AI integration and translanguaging practices. His work reflects a commitment to both theoretical rigor and practical transformation in educational contexts.
